                                                                                                                                                                                                                                                                                                              This represents a human fibroblast growth factor (FGF)-23 polypeptide. The DNA insert is contained in ATCC Deposit No. PTA-1617. FGF-23 can be expressed by standard recombinant methodology. The FGF-23 polypeptides, polynucleotides, modulators and antibodies are useful for treating, preventing, or ameliorating an FGF-23 polypeptide-related disease, condition or disorder especially autosomal dominant hypophosphatemic rickets (ADHR). They are also useful for diagnosing a pathological condition and for stimulating angiogenesis, promotting wound healing and treating disorders of the liver.
                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-FEB-2000; 2000US-0182442

                                           The present sequence represents fibroblast growth factor 23 (FGF-23). CC Human FGF-23 polymucleotides and polypeptides are useful for treating captient suffering from traumatic injury or a condition characterized by dysfunction of or injury to skin cells, a condition characterized by CC inadequate function of placental cells (e.g. congenital defects, CC fertility, or abnormal growth), a condition characterized by inadequate function of the thymus, a condition characterized by concision of the thymus, a condition characterized by inadequate function of the thymus, a condition characterized by inadequate contiferative disorder of the thymus, or differentiation disorder of the thymus, or differentiation disorder of the thymus, or a condition characterized by central nervous system conditions, a condition characterized by central nervous system conditions, and constant of sease, and intestinal wounds, ulcers, inflammation, CC disorder (e.g. Parkinson's disease or Alzheimer's disease, in the treatment conformation and surgical anastomoses, motility and absorption disorders, and congenital malformations of the intestine. They are also useful for treating ischemic vascular diseases, enal artery disease, stroke) and congenital disease, renal artery disease, stroke) and constitution or death of skeletal muscle cells, hone cells or supporting constitution or death of skeletal muscle cells, hone cells or supporting constitution or death of skeletal muscle cells, bone cells or supporting constitutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical

Claim 12; Fig 266; 813pp; English

CC PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC Some of the 275 sequences are also useful to stimulate the release of the under necrosis factor-alpha (TNF-alpha) from human blood, the control sample. CC proliferation or differentiation of chondrocytes, the proliferation or control sequences are associated to stimulate the release of control sequences from cc cartilage, the proliferation of inner ear utricular supporting cells or control sequences, the release of proteoglycans from cc cartilage, the proliferation of inner ear utricular supporting cells or conforted to the proliferation of a cytokine from peripheral blood connocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by conscitute the proliferations. The factor VIIA. The PRO polypeptides can be used in assays to identify consciules involved in binding interactions. The polymcleotides encoding PRO polypeptides can be used in assays to identify consciules involved in binding interactions. The polymcleotides encoding PRO polypeptides can be used in gene therapy. AAU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     맑
                                     The present sequence represents a human fibroblast growth factor (FGF) homologue, designated zFGF12. The zFGF12 polypeptides contain a motif (see AAB84654) that occurs in all known members of the FGF family, which is unique to these proteins. This motif is highly conserved in all members of the FGF family, however, zFGF12 appears to be unique in that the conserved Glu is a His (residue 117) substituting a basic amino acid (aa) residue for an acidic aa residue. The zFGF12 gene is mapped to chromosome 12, location 12q.1.3. zFGF12 may be used in the
prevention, diagnosis and treatment of diseases associated with inappropriate FGF expression. Disorders and processes that may l prevented, diagnosed, and treated include, for example prolifer.
                                                                                                                                                                                                                 A fibroblast growth factor homolog polypeptide zFGF12 and the nucleic acids that encode it, useful for preventing, diagnosing and controlling e.g. diabetes, amylotrophic lateral sclerosis, strokes, angiogenesis
                                                                                                                                                                                                                                                                                   WPI; 2001-418357/44.

The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secre

                                        sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF4470 PRO sequences and hybridisation probes used in the isolation of human PRO sequences. AAF44087 to AAF44269 and AAB65154 to AAB65300 represent human PRO polynucleotide and protein
                                                                                                                                                                                                                                                                                             PRO polynucleotides used to produce polypeptides used to target bioactive molecules such as toxins, radiolabels or antibodies, specific cells, to cause targeted cell death -
                                                                                                                                                                                   The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bloactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide

                                                                                calcinosis. Osteoporosis, conditions (e.g., dermatomyositis) involving deposition of calcium and phosphate in the arteries or soft tissues of mammal, coronary artery disease may also be treated using methods described in the invention. Preferably, the nucleic acid or the polypeptide comprises a mutation that confers increased stability on FGF23 polypeptide. The polynucleotide encoding (I) can be used in gene therapy to treat diseased individuals. This is the amino acid sequence of the novel human fibroblast growth factor 23 (FGF23) studied in the
                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated polypeptide (I) comprising a fibroblast growth factor 23 (FGF23) polypeptide or its mutant, variant, homologue or fragment. (I) is useful for treatment of a hypophosphataemic disorder such as autosomal dominant hypophosphataemic rickets (ADHR), X-linked hypophosphataemic rickets (XLH), hereditary hypophosphataemic rickets with hypercalciuria (HHRH), hypophosphataemic bone disease (HBD), epidermal nevus syndrome, fibrous dysplasia tumour induced osteomalacia (TIO), and nephrolithiasis. (I) can also be used in treatment of a hyperphosphataemic disorder such as mild renal insufficiency and tumoural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel fibroblast growth factor 23, and polynucleotides encoding the polypeptides, useful for treating hyperphosphataemic disorders such mild renal insufficiency or tumoural calcinosis, or coronary artery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pibroblast growth factor 23; PGP23; hypophosphataemic disorder; autosomal dominant hypophosphataemic rickets; ADHR; fibrous dysplasia; X-linked hypophosphataemic rickets; XLH; tumour induced osteomalacia; TIO; hereditary hypophosphataemic rickets with hypercalciuria; HHRH; hypophosphataemic bone disease; HBD; epidermal nevus syndrome; nephrolithiasis; hyperhosphataemic disorder; mild renal insufficiency; tumoural calcinosis; osteoporosis; dermatomyositis; human.

OST311 has osteopathic, nephrotropic, antihyperphosphataemic and cytostatic activities. The OST311 polypeptide regulates phosphorus transport and calcium metabolism. OST311 sequences can be used for the treatment and diagnosis of skeletal disorders such as bone cancer, bone formation abnormalities, vitamin D resistance, osteoporosis, Paget's disease and bone calcium deficiency; kidney disorders such as kidney function deficiency, renal phosphate leakage, urinary tubule acidosis and Fanconi's disease. The present sequence is used in the exemplification of the present invention.

   The invention relates to a fibroblast growth factor polypeptide, designated zFGF12, comprising a sequence at least 95 % identical to residues 25 to 251 of the 251 amino acid sequence, given in the specification. The activity of the fibroblast growth factor of the invention may be described as vulnerary. zFGF12 can be used to promote wound healing of the epidermis, to protect and promote recovery of
invention may be described as vulnerary. wound healing of the epidermis, to prote epithelial cells in the gastrointestinal

The polypeptide can also be used to modulate proliferation and function of epithelial cells of prostate, cornea, mammary and kidney tissue. The polypeptide is also useful to stimulate proliferation of cultured mesenchymal cells and to identify new family members. The

The of a FGF23 mutant of the invention.

Note: The present sequence is not shown in the derived from the wildtype human FGF23 sequence the sequence listing (ABB77581).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a DNA (ABN81575) encoding a protein (ABB77581) FGF23 and mutants FGF23 comprising an amino acid substitution of arginine at position 176 to glutamine and/or position 179 to glutamine or tryptophan. The mutants are generated by introducing the following base changes in the nucleic acid sequence: R1760 mutant is generated by G527A; R179Q is generated by G536A; and R179W is generated by C535T. The protein and encoding DNA are applicable in remedies for hyperphosphataemia, including gene therapy. The present sequence is that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a DNA (ABN81575) encoding a protein (ABB77581) FGF23 and mutants FGF23 comprising an amino acid substitution of argining the position 176 to glutamine and/or position 179 to glutamine ord/or position 179 to glutamine ord tryptophan. The mutants are generated by introducing the following base changes in the nucleic acid sequence: R1760 mutant is generated by G527A; R1790 is generated by G536A; and R179W is generated by C535T. Thy protein and encoding DNA are applicable in remedies for hyperphosphataemia, including gene therapy. The present sequence is that
                                                                                                                                                                                                                                               Human fibroblast growth factor-23 (FGF23), R176Q mutant
                                                                                                                                                                                                                                                                                      02-JUL-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mammal, coronary artery disease may also be treated using methods described in the invention. Preferably, the nucleic acid or the polypeptide comprises a mutation that confers increased stability on FGF23 polypeptide. The polymucleotide encoding (I) can be used in gene therapy to treat diseased individuals. This sequence represents a mutant of the novel human fibroblast growth factor 23 (FGF23) used to study residues in the predicted protease cleavage site. Note: This sequence does not appear in the specification but has been created from the wild type sequence shown in AAU79335 using information given in example 1 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated polypeptide (I) comprising a fibroblast growth factor 23 (FGF23) polypeptide or its mutant, variant, homologue or fragment. (I) is useful for treatment of a hypophosphataemic disorder such as autosomal dominant hypophosphataemic rickets (ADHR), x-linked hypophosphataemic rickets (XIH), hereditary hypophosphataemic rickets with hypercalciuria (HHRH), hypophosphataemic bone disease (HBD), epidermal nevus syndrome, fibrous dysplasia tumour induced osteomalacia (TIO), and nephrolithiasis. (I) can also be used in treatment of a hyperphosphataemic disorder such as mild renal insufficiency and tumoural calcinosis. Osteoporosis, conditions (e.g., dermatomyositis) involving deposition of calcium and phosphate in the arteries or soft tissues of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel fibroblast growth factor 23, and polynucleotides encoding the polypeptides, useful for treating hyperphosphataemic disorders such mild renal insufficiency or tumoural calcinosis, or coronary artery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2002-329399/36
